GET TO KNOW

HERZUMA

BEING DIAGNOSED WITH CANCER CAN BE OVERWHELMING. LEARNING MORE ABOUT WHAT CAN BE DONE TO TREAT IT MAY HELP YOU BE PREPARED.

Whether you are getting ready to start treatment for HER2+ breast cancer with HERZUMA or you are considering it, this guide can help you:

GET THE FACTS about HERZUMA and how it may help

LEARN what to expect from treatment with HERZUMA

UNDERSTAND why your doctor may prescribe HERZUMA

FIND OUT about helpful resources

HER2+ = Human Epidermal growth factor Receptor 2-positive.

APPROVED USES

Patients are selected for therapy with HERZUMA based on an FDA-approved test.

Adjuvant Breast Cancer

HERZUMA is a prescription medicine used for the treatment of early-stage breast cancer that is **H**uman **E**pidermal growth factor **R**eceptor **2**-positive (**HER2+**) and has spread into the lymph nodes, or is HER2-positive and has not spread into the lymph nodes. If it has not spread into the lymph nodes, the cancer needs to be estrogen receptor/progesterone receptor (ER/PR)-negative or have one high-risk feature. HERZUMA can be used in several different ways: • As part of a treatment course including the chemotherapy drugs doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel. This treatment course is known as "**AC → TH**" • With the chemotherapy drugs docetaxel and carboplatin. This treatment course is known as "**TCH**" • Alone after treatment with multiple other therapies, including an anthracycline (doxorubicin)-based therapy (a type of chemotherapy)

See Approved Uses statement continued on next page.

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

WHAT IS **HERZUMA**?

Herzuma® (trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

HERZUMA is a prescription drug used in adults to treat HER2+ breast cancer. HERZUMA is not chemotherapy, though it is sometimes used with chemotherapy. HERZUMA is a type of treatment called an antibody therapy. This means HERZUMA is able to treat HER2+ breast cancer cells, which can multiply rapidly.

HERZUMA MAY WORK TO TREAT HER2+ BREAST CANCER IN THE FOLLOWING WAYS:

- By binding to the HER2 receptor on cancer cells
- By telling the immune system it's okay to destroy cancer cells
- By destroying cancer cells on its own

HERZUMA may also harm some healthy cells in the body. Talk to your doctor about any concerns you may have.

BIOLOGICS AND BIOSIMILARS

Biologics are complex drugs produced from living cells.

Biosimilars are FDA-approved biological products that are highly similar to and have no clinically meaningful differences from existing FDA-approved biologic drugs.

HERZUMA is a biosimilar to Herceptin® (trastuzumab) for HER2+ breast cancer.

APPROVED USES (continued)

Patients are selected for therapy with HERZUMA based on an FDA-approved test.

Metastatic Breast Cancer

HERZUMA has 2 approved uses in metastatic breast cancer: • HERZUMA in combination with the chemotherapy drug paclitaxel is approved for the first-line treatment of **H**uman **E**pidermal growth factor **R**eceptor **2**-positive (**HER2+**) metastatic breast cancer • HERZUMA alone is approved for the treatment of HER2-positive breast cancer in patients who have received one or more chemotherapy courses for metastatic disease

IMPORTANT SAFETY INFORMATION

HERZUMA can cause serious side effects, including:

- **HEART PROBLEMS:** Trastuzumab products can cause heart problems—such as congestive heart failure or reduced heart function—with or without symptoms. The risk for and seriousness of these heart problems were highest in people who received both a trastuzumab product and a certain type of chemotherapy (anthracycline). In a study of adjuvant (early) breast cancer, one patient died of significantly weakened heart muscle. Your healthcare provider will check for signs of heart problems before, during, and after treatment with HERZUMA

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

ABOUT HER2+ BREAST CANCER

TREATMENT GOALS

YOUR DOCTOR MAY PRESCRIBE HERZUMA TO **TREAT YOUR HER2+ BREAST CANCER**

APPROVED USES

HERZUMA is used for the treatment of adjuvant breast cancer and metastatic breast cancer in patients selected for therapy based on an FDA-approved test.

See complete indication on pages 2-3

IMPORTANT SAFETY INFORMATION (continued)

HERZUMA can cause serious side effects, including:

- **INFUSION REACTIONS:** Infusion reactions, sometimes serious or fatal, have occurred. Symptoms may include: fever, chills, feeling sick to your stomach (nausea), throwing up (vomiting), pain (in some cases at tumor site), headache, dizziness, and shortness of breath. These symptoms usually happen within 24 hours after receiving HERZUMA

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

WHAT IS HER2+ BREAST CANCER?

Breast cancer happens when cells in the breast grow out of control. These cells often form a tumor that can be felt as a lump. The tumor can be benign (not cancerous) or malignant (cancerous).

When you are diagnosed with breast cancer, your doctor will order tests to learn more about how the cancer should be treated. One of those tests will assess the HER2 status of your tumor.

HER2 is a protein on the outside of all cells in the breast. HER2+ cancer cells have higher than normal levels of HER2. HER2+ cancer cells tend to grow and spread faster (metastasize) than other types of breast cancer.

AN ESTIMATED 1 IN 5 WOMEN WITH BREAST CANCER WILL BE HER2+

SYMPTOMS OF HER2+ BREAST CANCER

A new lump or mass on the breast is the most common symptom of breast cancer. They can be hard, irregular, and painless, or soft, round, and painful.

Other possible symptoms include:

- Swelling in the breast
- Skin changes on the breast or nipple including irritation, dimples, redness, scaliness, or thickening
- Painful breast or nipples
- Nipple turning inward
- Fluid discharge from the nipple
- Lump or swelling around lymph nodes under the arm or around the collar bone

teva

GOALS FOR **TREATMENT**

When treatment is needed, your healthcare team will talk with you about options and come up with a treatment plan that's right for you. Some goals when treating HER2+ breast cancer may be to help:

- Keep the disease from advancing
- Put the disease into remission

TREATMENT OPTIONS

HER2+ BREAST CANCER

Treatments for breast cancer can include surgery, radiation, chemotherapy, hormone therapy, or immunotherapy. However, for HER2+ breast cancer, a therapy called targeted therapy is often recommended. Treatments for HER2+ breast cancer target the HER2+ protein.

THE APPROPRIATE TREATMENT FOR YOU DEPENDS ON:

HOW FAST THE CANCER IS GROWING

THE STAGE OF THE CANCER

YOUR PERSONAL CHARACTERISTICS
SUCH AS AGE AND OVERALL HEALTH

PLEASE TALK WITH YOUR DOCTOR ABOUT THESE AND OTHER TREATMENT OPTIONS

teva

Herzuma®

STARTING HERZUMA

STARTING TREATMENT FOR HER2+ BREAST CANCER CAN LEAVE YOU WONDERING WHAT QUESTIONS TO ASK NEXT. THE INFORMATION IN THIS SECTION MAY HELP YOU GET THE ANSWERS YOU NEED.

APPROVED USES

Patients are selected for therapy with HERZUMA based on an FDA-approved test.

Adjuvant Breast Cancer

HERZUMA is a prescription medicine used for the treatment of early-stage breast cancer that is **H**uman **E**pidermal growth factor **R**eceptor **2**-positive (**HER2+**) and has spread into the lymph nodes, or is HER2-positive and has not spread into the lymph nodes. If it has not spread into the lymph nodes, the cancer needs to be estrogen receptor/progesterone receptor (ER/PR)-negative or have one high-risk feature. HERZUMA can be used in several different ways:

- As part of a treatment course including the chemotherapy drugs doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel. This treatment course is known as "**AC → TH**"
- With the chemotherapy drugs docetaxel and carboplatin. This treatment course is known as "**TCH**"
- Alone after treatment with multiple other therapies, including an anthracycline (doxorubicin)-based therapy (a type of chemotherapy)

See Approved Uses statement continued on next page.

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

WHAT YOU SHOULD TELL YOUR DOCTOR BEFORE STARTING HERZUMA

Herzuma® (trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

BEFORE RECEIVING HERZUMA TELL YOUR DOCTOR IF YOU:

- Have trouble with your heart. HERZUMA can cause heart problems in some patients
- Are pregnant or plan to become pregnant. Trastuzumab products can cause fetal harm when administered to a pregnant woman. Because trastuzumab stays in the body for a long time, you should avoid becoming pregnant for 7 months after discontinuing HERZUMA
- Are taking any other medications, including prescription and over-the-counter medicines, vitamins, and herbal supplements
- Know the medicines you take. Keep a list of them to show to your doctor and pharmacist when you get a new medicine. Do not take any new medicine without speaking with your doctor

APPROVED USES (continued)

Patients are selected for therapy with HERZUMA based on an FDA-approved test.

Metastatic Breast Cancer

HERZUMA has 2 approved uses in metastatic breast cancer:

- HERZUMA in combination with the chemotherapy drug paclitaxel is approved for the first-line treatment of **H**uman **E**pidermal growth factor **R**eceptor **2**-positive (**HER2+**) metastatic breast cancer
- HERZUMA alone is approved for the treatment of HER2-positive breast cancer in patients who have received one or more chemotherapy courses for metastatic disease

IMPORTANT SAFETY INFORMATION (continued)

HERZUMA can cause serious side effects, including:

- **SEVERE LUNG PROBLEMS**: Trastuzumab product use can result in serious and fatal lung problems. Symptoms may include: severe shortness of breath, fluid in or around the lungs, weakening of the valve between the heart and lungs, not enough oxygen in the body, swelling of the lungs, and scarring of the lungs. Your healthcare provider may check for signs of severe lung problems

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

WHY IS HEART MONITORING **NECESSARY** WHILE RECEIVING HERZUMA THERAPY?

Herzuma® (trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

Your healthcare team will monitor your heart for potential cardiac issues to catch them early on so they can be properly treated.

Your heart will be monitored at the start of treatment, every 3 months while on HERZUMA therapy, and every 6 months for at least 2 years following completion of HERZUMA as a component of adjuvant therapy. Heart function will be tested with an ECHO or MUGA scan.*†

DURING HERZUMA THERAPY

- **Pausing HERZUMA**
  In case of reduced heart function, your doctor may hold HERZUMA therapy up to 3 times
- **Restarting HERZUMA**
  Your doctor may restart HERZUMA therapy up to 3 times if your heart function improves and returns to normal limits after HERZUMA has been held
- **Discontinuing HERZUMA**
  HERZUMA will be discontinued if you experience congestive heart failure or significantly reduced heart function (when the heart can't keep up with the amount of blood flowing through it)

AFTER HERZUMA THERAPY

Your heart should be monitored every 6 months for at least 2 years

*ECHO scan is an ultrasound image of the heart.

†MUGA scan takes a moving picture of your heart pumping blood following an injection of a nontoxic radioactive substance.

IMPORTANT SAFETY INFORMATION (continued)

HERZUMA can cause serious side effects, including:

- **HARM TO UNBORN BABIES OR BIRTH DEFECTS:** Trastuzumab products may result in birth defects or the death of an unborn baby. Contraception should be used while receiving HERZUMA and for **7 months** after your last dose of HERZUMA. If you are or become pregnant while receiving HERZUMA or **within 7 months** after your last dose of HERZUMA, you should immediately contact your doctor. Patients should contact their healthcare professional with a known or suspected pregnancy

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

Herzuma®
(trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

HOW WILL YOU RECEIVE HERZUMA?

- HERZUMA is given by infusion through a needle placed in a vein (intravenous infusion) in your arm, or through a port
- Talk to your doctor to find out whether you will receive HERZUMA in an infusion center or in your doctor's office
- The first dose of HERZUMA takes about 90 minutes. After that, the other doses of HERZUMA only take about 30 minutes

WILL YOU HAVE TO TAKE ANY MEDICINE BEFORE YOU RECEIVE HERZUMA?

- Your healthcare provider may prescribe medicines before each infusion of HERZUMA to reduce infusion side effects such as fever and chills
- Taking the suggested medication before treatment may reduce the chance of having a severe reaction during the first HERZUMA infusion
- Be sure to ask your doctor or nurse about what you should take before HERZUMA treatment

IMPORTANT SAFETY INFORMATION (continued)

HERZUMA can cause serious side effects, including:

- **LOW WHITE BLOOD CELL COUNTS:** Low white blood cell counts (which may be life-threatening) were seen more often in patients receiving trastuzumab plus chemotherapy than in patients receiving chemotherapy alone. Your healthcare provider may check for signs of low white blood cell counts

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

HOW WILL YOUR DOCTOR CHECK UP ON YOU DURING TREATMENT?

- Your doctor should do blood tests and monitor your heart regularly to check for side effects to HERZUMA
- Before each HERZUMA treatment, your healthcare provider will ask you questions about your general health. Tell your healthcare provider about any new symptoms

teva

Herzuma®
(trastuzumab-pkrb)

For Injection • 420 mg/vial • 150 mg/vial

HOW CAN YOU GET READY FOR YOUR HERZUMA INFUSION?

Use this list to help prepare yourself before every infusion:

1 PLAN TRANSPORTATION TO AND FROM YOUR INFUSION APPOINTMENT

You may feel exhausted after your infusion, so having someone else drive you home after treatments is a good idea.

2 BRING SOMETHING TO PASS THE TIME

A day at the clinic can be long. Reading magazines, completing a word search, or enjoying a similar activity can help you occupy the time.

3 BRING FOOD AND BEVERAGES

You may be at the clinic for most of the day, so pack some snacks or a light meal and bring a water bottle.

4 TELL YOUR DOCTOR OR NURSE ABOUT MEDICINES YOU ARE TAKING

If you take any other medicines, tell your doctor or nurse. Do not start any new medications without talking to your doctor. Your doctor may give you special instructions for your infusion day.

5 SPEAK UP

Tell your doctor or nurse about any concerns you have.

teva

Herzuma®
(trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

QUESTIONS FOR **YOUR DOCTOR**

IT CAN BE DIFFICULT TO KNOW THE RIGHT QUESTIONS to ask your doctor after being diagnosed with HER2+ breast cancer or being prescribed HERZUMA. While you may have already talked with your doctor about some of these topics, the questions that follow can be a good way to start or continue those conversations.

IMPORTANT SAFETY INFORMATION (continued)

Your healthcare provider will stop treatment with HERZUMA if you have severe, serious, or life-threatening side effects.

The most common side effects for patients receiving HERZUMA for breast cancer include: headache, diarrhea, feeling sick to your stomach (nausea), chills, fever, infection, weakened heart muscle, unable to sleep, cough, and rash.

These are not all of the possible side effects with HERZUMA.

Please see the HERZUMA full Prescribing Information, including **BOXED WARNINGS.**

Talk to your doctor about any side effects you may experience.

You may report side effects to FDA at 1-800-FDA-1088. You may also report side effects to Teva at 1-888-483-8279.

Please see Important Safety Information throughout and full Prescribing Information, including BOXED WARNINGS, for HERZUMA to discuss with your doctor.

teva

EXAMPLE QUESTIONS TO ASK YOUR DOCTOR

Herzuma® (trastuzumab-pkrb)
For Injection • 420 mg/vial • 150 mg/vial

QUESTIONS ABOUT **HER2+ BREAST CANCER**:

WHAT STAGE OF HER2+ BREAST CANCER DO I HAVE?

WHAT ARE MY TREATMENT OPTIONS?

WHAT ARE THE POSSIBLE RISKS AND SIDE EFFECTS OF HER2+ BREAST CANCER TREATMENT OPTIONS?

WHAT IS MY TREATMENT PLAN?

WHERE CAN I GET MORE INFORMATION ABOUT MY TREATMENT OPTIONS AND HER2+ BREAST CANCER?

QUESTIONS ABOUT **HERZUMA**:

WHY HAVE I BEEN PRESCRIBED HERZUMA?

WHAT ARE SIDE EFFECTS OF HERZUMA?

WHAT ARE POSSIBLE RISKS AND BENEFITS OF HERZUMA?

HOW LONG WILL I NEED TO TAKE HERZUMA?

WHICH PROGRAMS CAN HELP ME SAVE ON THE COST OF HERZUMA?

APPROVED USES

Patients are selected for therapy with HERZUMA based on an FDA-approved test.

Adjuvant Breast Cancer

HERZUMA is a prescription medicine used for the treatment of early-stage breast cancer that is **H**uman **E**pidermal growth factor **R**eceptor **2**-positive (**HER2+**) and has spread into the lymph nodes, or is HER2-positive and has not spread into the lymph nodes. If it has not spread into the lymph nodes, the cancer needs to be estrogen receptor/progesterone receptor (ER/PR)-negative or have one high-risk feature. HERZUMA can be used in several different ways:

- As part of a treatment course including the chemotherapy drugs doxorubicin, cyclophosphamide, and either paclitaxel or docetaxel. This treatment course is known as "**AC → TH**"
- With the chemotherapy drugs docetaxel and carboplatin. This treatment course is known as "**TCH**"
- Alone after treatment with multiple other therapies, including an anthracycline (doxorubicin)-based therapy (a type of chemotherapy)
